

BUSINESS CONTINUITY MANAGEMENT POLICY

ISO 22301:2019

TEDRA Group's goal is to ensure the continuity of the company's critical operations and their effective recovery after a disruptive incident or natural disaster.

In the company, an integrated Business Continuity Management System has been developed and implemented in accordance with the requirements of the International Standard 22301:2019. Within the framework of this System, continuous and systematic identification of risks and threats and assessment of their impact is applied, in order to plan and test effective response and recovery in advance.

To achieve this, the following have been developed:

- Business Impact Analysis Study
- Risk Assessment
- Business Continuity Plans
- Business Continuity Procedures

These cover all the critical activities of the company and are reviewed and updated at regular intervals, so that their content accurately reflects the current situation.

Business Continuity Plans are tested periodically through readiness exercises to ensure that they are successfully activated in emergency situations, and that management and employees understand how to implement them, their roles and responsibilities.

The Management is committed to the continuous improvement of the Business Continuity Management System through the provision of the necessary resources, prioritizing disruptive events:

- the safety of employees and premises
- the continued operation of critical activities
- the restoration of operations within the time limits set
